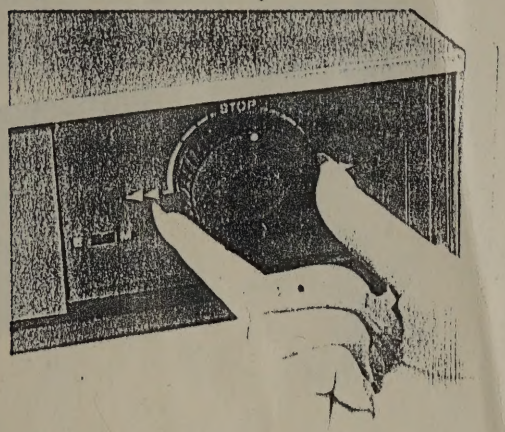
Geotechnical Engineering Bureau

Loading film – Blue cartridge; white labels are facing back & right

Check that cartridge is properly inserted and turn the Speed control knob clockwise all the way in order to take up the film on the Take-up spool. Then, turn the Speed control knob counter-clockwise to "STOP" position.

Operation



1) Switch the reader-printer on. Scan the film by turning the Speed control knob clockwise or counter-clockwise, and select a desired image on the screen.
2) Adjust the image position on the screen with the Vertical scanning control knob. A slanted image can be corrected by rotating the carrier.

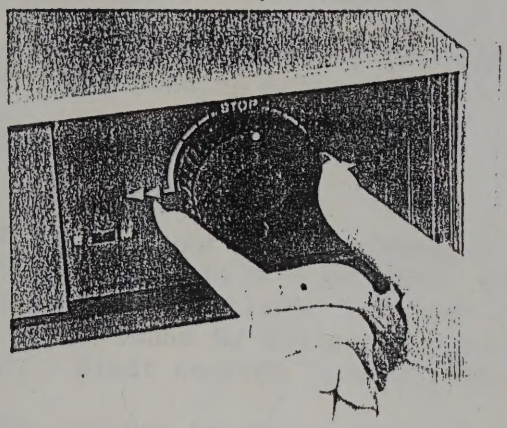
NOTES:
- Use the Odometer as a retrieval aid when searching film. A 100-foot roll of film equals approx. 240 increments. When the film runs from left to right, the counter number increases; when the film runs in reverse, the number decreases. Pressing the reset button resets the counter number to 0 (zero).
- Be sure not to keep the Speed control knob set in rewind position, since the open reel shaft tends to get loose.

3) To rewind, turn the Speed control knob counter-clockwise until it stops. A relatively loud click is heard. Check that film is completely taken up and return the Speed control knob to the "STOP" position. At this time, cartridge can be removed.

Loading film – Blue cartridge; white labels are facing back & right

Check that cartridge is properly inserted and turn the Speed control knob clockwise all the way in order to take up the film on the Take-up spool. Then, turn the Speed control knob counter-clockwise to "STOP" position.

Operation



1) Switch the reader-printer on. Scan the film by turning the Speed control knob clockwise or counter-clockwise, and select a desired image on the screen.
2) Adjust the image position on the screen with the Vertical scanning control knob.
   * A slanted image can be corrected by rotating the carrier.

NOTES:
- Use the Odometer as a retrieval aid when searching film. A 100-foot roll of film equals approx. 240 increments. — Finding information using this tape log —

1. Know the region number and tape quad containing the desired project, title, P.I.N. information.

2. The front portion of this tape log is a listing, by regions, of the film tape rolls for each region. The topo quad(s) included on each film tape roll are listed next to each film tape roll number.

3. Using this front regional listing for tape selection is a matter of locating the proper regional list, then finding the topo quad number containing the desired information. The topo quad number is listed next to a corresponding film tape roll number.

4. When tape selection is made, the tape log can be used to locate specific information.

5. Pages through the remainder of this tape log are labelled at the top, by Region and film tape roll numbers. These pages list, in order, the information included for each labelled film tape. The desired information can be found by using the appropriate film roll listing or by using the 1, 2, 3 digit counter locator, which is rightmost of a project listing.

6. The counter locator refers to the Minolta reader /printer odometer counter, see deck of machine. By zeroing (000) the odometer counter as noted in the tape log with that of a specific film tape listing, the counter locators of the tape log will be more reliable. By matching counter locators of the tape log project listing with that of the Minolta the desired information will be easier to find.

REGION 1
TOPO QUADS/FILM ROLL (TAPE)

Roll No. 1 - 176/183/184/189/190/191/192/201/202/203/204/205/206
